

Interaction Report

Report ID: 1
Date Produced: 07 October 2024

Antiretroviral Treatment

Co-medications

Emtricitabine/Tenofovir-DF (FTC/TDF, PrEP)

Activated charcoal

This report lists the summaries of potential interactions (i.e. "red", "amber" and "yellow" classifications) for the drugs in the table above.

Interactions with a "green" or "grey" classification (i.e. no clinically significant interaction or no clear data) have been checked and are listed at the end of this report, but summaries are not shown.

For full details of all interactions, see www.hiv-druginteractions.org.

Description of the interactions

Potential weak interaction - additional action/monitoring or dosage adjustment is unlikely to be required (YELLOW)

Emtricitabine/Tenofovir-DF (FTC/TDF, PrEP) + Activated charcoal

Coadministration has not been studied. Activated charcoal absorbs substances in the stomach and intestines and may decrease absorption of orally administered medicines. If coadministration is required, administration of activated charcoal and emtricitabine/tenofovir-DF should be separated by 4 hours. [Note: this interaction is not specific for emtricitabine/tenofovir-DF, but for any oral medication taken with activated charcoal.]
